Outline

Theory

Results

Background

$$H = H_J + H_D$$

Heisenberg exchange Hamiltonian : $H_J = -J \sum_r \vec{S}_r \cdot (\vec{S}_{r+\hat{x}} + \vec{S}_{r+\hat{y}}) - H_Z \sum_r \vec{S}_r$

Dzyaloshinskii-Moriya interaction Hamiltonian : $H_D = D \sum_r \vec{S}_r \times \vec{S}_{r+\hat{x}} \cdot \hat{x} + \vec{S}_r \times \vec{S}_{r+\hat{y}} \cdot \hat{y}$

Simulation parameters

40 x 40 grid

H, D being variable and J constant

beta being quenched

Spin lattice

Quenching

Wrapping number

Skyrmion detection

Skyrmion detection
